

4-channel contact closure eurocard

The Click 110 contact closure card provides 4-channel contact closure outputs between the Wavetronix SmartSensor and compatible outstations. The card plugs into a detection card slot and automatically detects baud rates from the sensor.

- Designed to meet UK Highways Agency TR 2512
- Uses industry-standard RS-485 communication
- Automatically sets baud rate
- Displays detection and fault state
- Dual communication ports for separate data and configuration communication
- Fail-safe mode in case of interruption of data flow
- Solid state outputs
- Detection outputs in both normally open and normally closed
- Master fault output in both normally open and normally closed
- Configurable via hardware (DIP switches) or software (front panel interface or Click Supervisor)
- Software configuration is read-only when in Hardware Configuration mode
- Selectable fault latching
- All channels can be enabled or disabled independently
