

## UK congestion alert

The Click 516 is designed for use in the UK to help the SmartSensor HD interface with MIDAS outstations and to accurately generate HIOCC alerts.

- Supports up to 10 lanes of traffic
- Receives data from SmartSensor HD
- Uses Click Supervisor for simple user configuration
- Mounts to a DIN rail for quick and easy installation
- Pluggable screw terminals can be removed for prewiring and are redkeyed to minimize incorrect wiring
- Results can be monitored through computer or through LEDs on device faceplate
- Push-button cycles through operation modes
- Operates in two states: Normal and HIOCC
- Works along with the Click 110 in conjunction with the MIDAS outstation
